

## Problem sheet (To be done in week 3)

### Linear Algebra I, Dr A Henke, MT 2007

Student Number: 654321

Deadline for online homework: Sat Oct 20 18:00:00 2007

This file has been created: Wed Oct 10 16:40:44 2007

From now on your online submission will be marked, and the points will be recorded. For every correct answer, you get 1 point; for every wrong answer, you get -1 points. For every question you decide not to answer (indicated by the option -) you get 0 points. Submit your answers via the web-interface. Before the deadline you are able to change your solutions if necessary and re-submit this changed solution again; the last submission counts.

1	Which of the following matrices are symmetric, are skew-symmetric, are orthogonal? $A = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix}, B = \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix}, C = \begin{pmatrix} 0 & 1 \\ 0 & 1 \end{pmatrix}, D = \begin{pmatrix} 2 & 0 \\ 0 & 2 \end{pmatrix}, E = \frac{1}{\sqrt{2}} \begin{pmatrix} 1 & -1 \\ -1 & 1 \end{pmatrix},$ $F = \begin{pmatrix} 0 & 2 & 1 \\ -2 & 0 & 1 \\ -1 & -1 & 0 \end{pmatrix}, G = \begin{pmatrix} -1 & 0 & 0 \\ 0 & -1 & 0 \\ 0 & 0 & -1 \end{pmatrix}, H = \begin{pmatrix} 0 & -1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & -1 \end{pmatrix}.$
	Is $D$ orthogonal? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Is $F$ symmetric? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Is $E$ orthogonal? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
2	Let $A$ and $B$ be two square matrices of the same size with $A$ symmetric and $B$ skew-symmetric. Determine which of the following matrices are symmetric and which are skew-symmetric.
	Is $B^2$ symmetric? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Is $B^T(A^T + A)B$ skew-symmetric? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Is $AB + BA$ symmetric? <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
3	Let $C$ and $D$ be orthogonal square matrices of the same size with real entries. Let $\lambda$ be some real number with $\lambda \neq 1$ . Decide whether the following statements are always correct.
	If the determinant of a matrix is one, then the matrix is orthogonal. <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	The matrix $C^{-1}$ is orthogonal. <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	The matrix $\lambda \cdot C$ is orthogonal. <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
4	All matrices occurring in this problem have real entries and all matrix products and sums are defined. We write $I$ for the identity matrix and $0$ for the zero matrix (of suitable sizes). Are the following statements correct?
	Let $A, B$ be matrices with $AB = 0$ . Then $BA = 0$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Let $A$ be an invertible matrix with $A^2 = A$ . Then $A = I$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Let $B$ be a matrix with $B^3 = B - I$ . Then $B^{-1} = I - B^2$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
5	Let $I_n$ be the $n \times n$ identity matrix and let $0_n$ be the $n \times n$ zero matrix. Are the following statements about matrices correct?
	Let $A \in \mathbb{M}_{m \times n}(\mathbb{R})$ and $B \in \mathbb{M}_{n \times m}(\mathbb{R})$ with $A \cdot B = I_m$ , then $B \cdot A = I_n$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Let $A \in \mathbb{M}_{m \times n}(\mathbb{R})$ and $B \in \mathbb{M}_{n \times m}(\mathbb{R})$ with $A \cdot B \cdot A = A$ . Then $A \cdot B = I_m$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>
	Assume $A \in \mathbb{M}_{2 \times 2}(\mathbb{R})$ with $A^2 = I_2$ , then $A = \pm I_2$ . <span style="float: right;"><input type="radio"/> Yes / <input type="radio"/> No</span>

Please submit your written solutions to the following problems to your college tutor. For this written part of your homework, the deadline set by your college tutor applies.

6	<p>For each <math>a \in \mathbb{R}</math>, define the matrix <math>A(a)</math> by</p> $A(a) = \begin{pmatrix} 1 & a & \frac{1}{2}a^2 \\ 0 & 1 & a \\ 0 & 0 & 1 \end{pmatrix}.$ <p>Show that for all <math>a, b \in \mathbb{R}</math> we have <math>A(a+b) = A(a)A(b)</math>. Deduce that each matrix <math>A(a)</math> is invertible.</p>
7	<p>Let <math>A, B</math> be square matrices of the same size. Show that the following statements are true.</p> <p>(a) If <math>A</math> is invertible then the inverse is unique.</p> <p>(b) If <math>A, B</math> are invertible then <math>AB</math> is also invertible.</p>
8	<p>Let <math>A</math> and <math>B</math> be two matrices such that <math>AB</math> and <math>BA</math> are defined and of the same size. We say that <math>A</math> and <math>B</math> commute with respect to multiplication if <math>AB = BA</math>. Now let <math>A</math> be a <math>2 \times 2</math> matrix with entries in <math>\mathbb{R}</math>.</p> <p>(a) Show that <math>A</math> commutes with <math>\begin{pmatrix} 1 &amp; 0 \\ 0 &amp; -1 \end{pmatrix}</math> if and only if <math>A</math> is diagonal.</p> <p>(b) Show that <math>A</math> commutes with <math>\begin{pmatrix} 1 &amp; 0 \\ 0 &amp; 0 \end{pmatrix}</math> if and only if <math>A</math> is diagonal.</p> <p>(c) Which <math>2 \times 2</math> matrices <math>A</math> commute with <math>\begin{pmatrix} 0 &amp; 1 \\ 0 &amp; 0 \end{pmatrix}</math>?</p> <p>(d) Deduce that <math>A</math> commutes with all <math>2 \times 2</math> matrices if and only if <math>A = \begin{pmatrix} \lambda &amp; 0 \\ 0 &amp; \lambda \end{pmatrix}</math> for some <math>\lambda \in \mathbb{R}</math>.</p> <p>(For those of you who found this problem too easy: Find all <math>n \times n</math> matrices which commute with any matrix <math>A \in \mathbb{M}_n(\mathbb{R})</math> for fixed <math>n \in \mathbb{N}</math>. Justify your answer.)</p>
9	<p>(Optional.)</p> <p>Show that a <math>2 \times 2</math> matrix <math>A = \begin{pmatrix} a &amp; b \\ c &amp; d \end{pmatrix}</math> has an inverse if and only if <math>ad - bc \neq 0</math>. Find <math>A^{-1}</math>.</p>
